in until 1952 the folish authorities bought grain from farmers on a compulsory basis and stored it in siles, elevators, and the like. In most cases farmers brought their grain in trucke directly to the cailway station. In 1952, however, separate storage depots were created in larger and semetimes even small villages; so that the farmers did not have to transport grain such a long distance. According to the local gogulation, the organization of the communal grain reals was not primarily intended to facilitate the work of the farmers; the purpose of securing a number of grain stores was to make sure that in case of war grain will be available to the large number of unit used to eliminate the deaper of borbing by creating a large number of small storage areas rether than concentrating stocks in a few large depots. Similar action has been taken to create potato pools in Poland. Large buildings such as restaurants were requisitioned for storage areas for potatoes.
